

Name of Website: Pins by Zoe

The description of your topic: I am making a showcase for my pin business. My website will be able to view products (pins), order products, leave reviews, and requests for custom designs. I already have a pin business and have done advertising through instagram and collected order data from google sheets. With a website of my own I will be able to have a one stop shop instead of having to go through multiple websites to get my information about orders. This will be a proof of concept and will not have a full ecommerce site but would show a rough idea of how that might look.

Page 1: Main: Log in/News!/About Us/FAQ (at the bottom)

Page 2: Designs (Administrator can add new designs or remove designs from catalog)

Page 3: Order

Page 4: Contact Us/Custom Designs/Feedback

Page 5: Reviews/Leave Review (Administrator must approve feedback before it is visible)

All Pages: Header at the top for login and account information.

Data that will be stored: We will be storing a list of pin designs, descriptions, price, amount of pins, locations for drop off, delivery instructions, pick up instructions, customer information (phone number, instagram handle, address, name), customer account (password, username) (connected to customer information). Forms and data entry will be validated prior to storage in a back-end database. The admin is the only one with access to all of this information aside from customer username and password/ customer data which can be changed by the user. There will be a separate Administration page accessible only to the site admin account.
